

Product Information

Promote™ AP Inoculant

What it is:

- A microbial inoculant featuring three individual trademarked strains of Lactic Acid Bacteria that can be used on many different types of forages
- Promotes lactic acid production
- Enhances a fast and efficient fermentation
- Expedites pH decline to improve silage stability
- Reduces dry matter losses

How it is used:

- Water-Soluble Form: Mix with cool, clean, non-chlorinated water. Apply the solution based on application rate for the type of applicator, nozzle and crop.
- Alfalfa, Grass, Small Grain, Corn & Sorghum Silage: Apply 1 g of water-soluble per ton of silage to provide 100,000 CFU/g of crop
- Dry Form: Apply 1 lb per ton of silage to provide 100,000 CFU/g of crop
