

Product Information

Forage Quality Minerals

Forage Quality Minerals are designed to match the mineral requirements of your cattle at different stages of production with the forage quality that is available.

FQ 2:1 Mineral: For cattle on good forage or for mixing into energy or protein supplements for beef cattle. Economical growth and maintenance of growing and mature cattle on good pasture.

FQ Mag 12 Mineral: For cattle at risk of grass tetany. High magnesium mineral for cattle on lush pasture with high fertility and at risk for grass tetany.

FQ 1:1 Mineral: For cattle on mature pasture of forage. High phosphorous mineral for cattle on mature low phosphorous forage.

FQ Breeder Mineral: For cattle during breeding season. High phosphorous mineral with elevated levels of chelated copper, manganese, and zinc. Elevated levels of vitamins A, D and E.

FSQ Mineral: Especially for cattle on fescue pasture and during breeding season. High levels of phosphorous and magnesium with elevated levels of chelated copper, manganese and zinc. Abundant levels of vitamins A, D and E.
